

# AVET Series - SER1

## Static Evidential Interview Recorder

The AVET Series SER1 static witness and suspect evidential DVD recorder is capable of recording audio only or video and audio in an evidentially secure manner that is compatible with the most demanding criminal justice system.

The SER1 has three camera inputs, camera 1 provides a focused view of the victim or witness, whilst camera 2 shows a wide angle view of the room, to clearly show all who are present at the interview. An optional 3rd camera input is provided for recording translators or interpreters. The SER1 is also capable of audio only interviews.

The SER1 has been designed to meet the specific requirements of police video/audio interviews and is evidentially secure in accordance with digital evidence procedure guidelines, including the Achieving Best Evidence, PACE and CJS2004 documents, for example, the SER1 finalises the DVD disks in less than 3 minutes. The unit can be securely fastened and has a tamper-proof screen for suspect interviews.

For each interview the SER1 produces up to three read only DVDs in accordance with best practice and utilises internal fail safe systems in case of a disk failure. Additionally the SER1 has network compatibility for integration with local and wide area networks.

The built-in 7" display provides video monitoring facilities and aids operator control of the SER1. External video and audio monitoring outputs are also provided.

Time, date and location data is automatically updated via GPS\* and superimposed onto the recorded video image in a non-block format.

Protection from short term power failures is provided via an internal battery.

Software can be easily and quickly upgraded. The future proof design provides network and USB connectivity.

### In Summary

- Capable of audio / audio-video interviews
- Suitable for suspect and witness interviews
- Network compatible
- Evidentially secure
- 3 Camera & 4 microphone inputs
- Time/date and location via GPS
- Internal fail safe system
- Tamper-proof design

\* Subject to external signal availability
